# MISSIO PROJECT

REQUEST FOR FUNDS FOR  
LUMEZI WATER AND SANITATION PROJECT

ZAMBIA

# The project

## Project Aim

The overarching aim of this project is to eradicate waterborne illnesses, break the cycle of socio-economic challenges caused by unsafe drinking water, and empower the community by providing sustainable access to clean water sources.

Locality: Luzaka, Lumezi, Zambia  
Diocese: Chipata Diocese, Zambia  
Project: Drilling of 3 Boreholes  
Budget: €8,348

“

"As we embark on this transformative journey, providing access to clean water becomes more than a mere project—it becomes our shared mission to break the chains of waterborne illnesses. In every drop, there lies the promise of a healthier community and a brighter future. Together, let us channel our efforts into this vital initiative, forging a path towards resilience, empowerment, and enduring hope."

Fr. Grevazio - Director of Project

”

## Situation Needs

The community faces a profound challenge as waterborne illnesses, stemming from contaminated shallow wells, create serious socio-economic hardships. Women and girls bear the burden of fetching water over long distances, exacerbating the issue. However, the community's strength lies in its agricultural entrepreneurship, with farming as a primary income source. Introducing clean water through this project not only promises to alleviate health concerns, reducing mortality rates, but also holds potential for economic upliftment. The pressing need for the project is evident, driven by the escalating hospitalizations due to waterborne diseases and the community's awareness of the risks associated with unsafe drinking water.

**Improve Access to Safe Drinking Water:**

Aim: To increase access to safe drinking water in the communities affected by waterborne illnesses.

**Empower Women and Girls:**

Aim: To reduce the burden on women and girls related to fetching water and improve their overall well-being.

**Reduce Waterborne Illnesses:**

Aim: To decrease the prevalence of waterborne illnesses in the communities.

**Increase Economic Productivity:**

Aim: To boost economic productivity by addressing the impact of waterborne illnesses on people's health.

**Project Aims**

The aim is to alleviate socio-economic challenges caused by prevalent waterborne illnesses in communities lacking safe drinking water. The contamination, primarily from shallow wells, has led to increased hospitalizations and reduced economic productivity. The focus is on providing immediate access to clean water, promoting health education, and empowering the community to collectively combat waterborne diseases for improved socio-economic conditions.

# Project Social need

The project is inclusive, respecting and refraining from any form of discrimination or interference with individuals' cultural or religious practices.

*Lumezi Project including:*

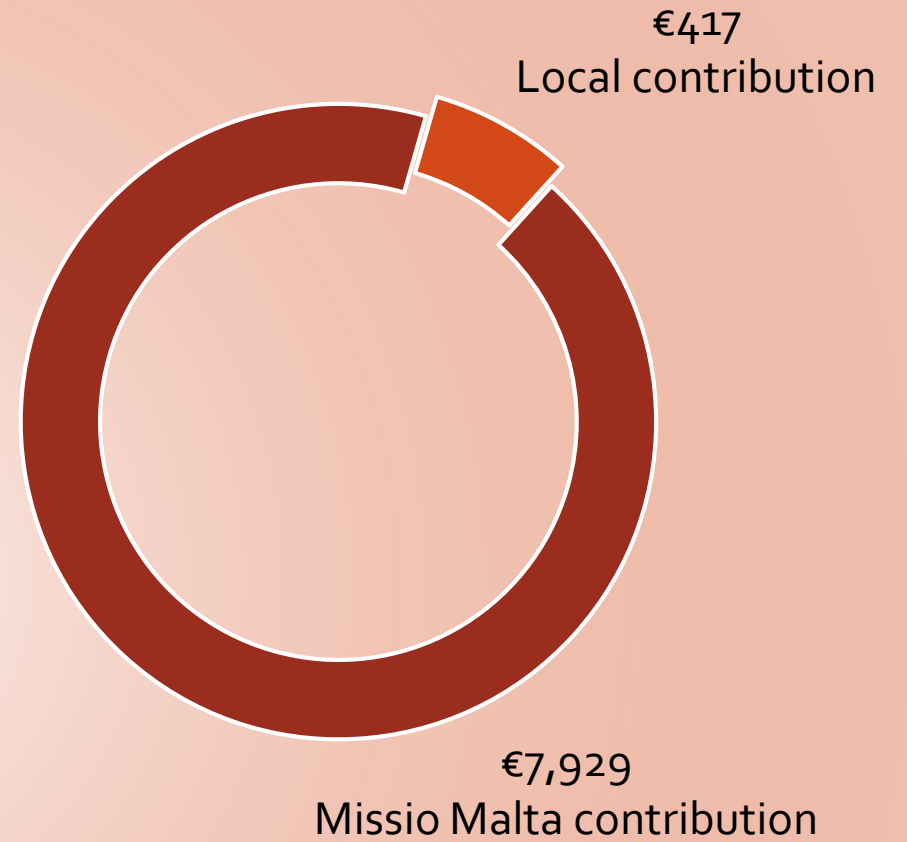

- 1. Drilling of Boreholes in 3 locations*
2. Set perimeter fences at locations of the 3 boreholes

**Project phases**

# Financials & Funding

Item	Cost
<i>Drilling of 3 Boreholes &amp; perimeters</i>	€8,346
	€8,346
